

## \* Programs

```
import tkinter as tk

def change_font():
    label.config(font = ("Arial", 18, "bold"))

root = tk.Tk()
label = tk.Label(root, text = "Hello, World!", font = ("Helvetica", 14))
label.pack()

button = tk.Button(root, text = "Change Font", command = change_font)
button.pack()

root.mainloop()
```

## Output:-

□ X  
Hello, World!

change font

Date: 6/10/25

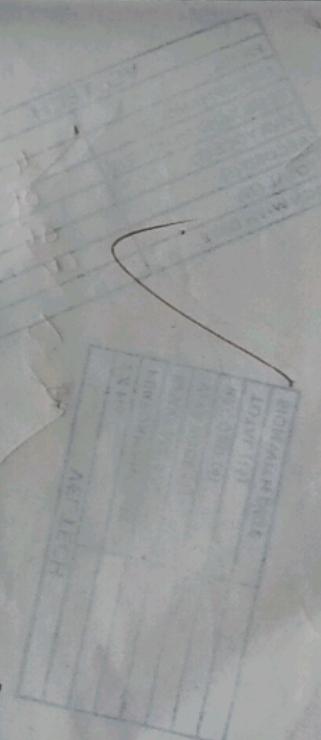

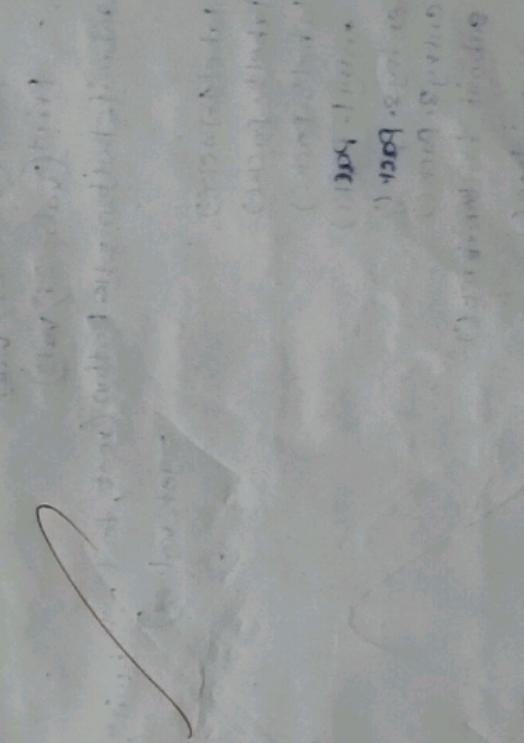

## TASK - II :- Use Tkinter module for UI design

Aim:- To use Tkinter module for UI design:

Problem A.I.1 :- write a Python GUI Program to create a label and change the label font style using Tkinter module.

### Algorithm:-

1. Import tkinter module.
2. Create a main window.
3. Create a label with desired text.
4. Add the label to the main window using pack() method.
5. Define a function to change font style.
6. Create a button to call the function when clicked.
7. Add the button to the main window using pack() method.
8. Start the main loop.

### Program:-

```
import tkinter as tk
root = tk.Tk()
root.title("Enter-Boxe Input")
label1 = tk.Label(root, text="Enter value1:")
label2 = tk.Label(root, text="Enter value2:")
entry1 = tk.Entry(root)
label3 = tk.Label(root, text="Enter value3:")
entry2 = tk.Entry(root)
entry3 = tk.Entry(root)
entry1.config(width=30)
entry2.config(width=30)
entry3.config(width=30)

def get_values():
    val1 = entry1.get()
    val2 = entry2.get()
    val3 = entry3.get()
    print("value 1:", val1)
    print("value 2:", val2)
    print("value 3:", val3)

submit_button = tk.Button(root, text="Submit", command=get_values)

label1.pack()
label2.pack()
label3.pack()
entry1.pack()
entry2.pack()
entry3.pack()
submit_button.pack()

root.mainloop()
```

TASK 11.2 :- write a Python GUI Program to create three single line text box to accept a value from the user using tkinter module.

### Algorithms:-

1. Import the tkinter module.
2. Create the main window.
3. Add labels and text-boxes to the main window.
4. Set the size of the textboxes.
5. Create a button to submit the values entered in the text-boxes.
6. Get the values entered in text-boxes when the button is clicked.

Output: At initial run application will ask

Q T... - □ X  and I will input  
value 1, value 2, value 3.

Enter value1:

Enter value2:

Enter value3:

Submit
